IAN O. WOODWARD

University of Tasmania Ph.D. (Zoology) Thesis, 1985: 'The structural dynamics of a tidal flat mollusc community'.

SURVEY RAW DATA

This appendix lists the raw data obtained in the distribution and dispersion surveys. The species counts are listed in the order they were recorded during the sorting. For each species the number of animals in each size class is given. The '0 mm' class represents those animals sized between 0 and 1 mm, and so on; the last class of each species accumulates all animals greater than that size. The data is also stored in this manner in free format on magnetic tape deposited with the thesis in the University of Tasmania Library.

The usual abbreviations for the species are used:

AC - *Anapella cycladea*
HB - *Hydrococcus brazieri*
ZD - *Zeacumantus diemensis*
KS - *Katelysia scalarina*
SF - *Salinator fragilis*
BA - *Bembicium auratum*
NA - *Notoacmea alta*
RC - *Rissopsis consobrina*
AM - *Agatha metcalfi*
SB - *Soletellina biradiata*
CP - *Cylichnina pygmaea*
NP - *Nassarius pauperatus*
AU - *Austrocochlea constricta*
WA - *Wallucina assimilis*
MC - *Microdiscula charopa*
AA - *Anthopleura aureoradiata*

The distribution transect data are identified in these listings by the codes TRANS/200381....TRANS/310382, according to the sampling date. Each quadrat (0.25 m x 0.25 m) is identified by its distance down the transect, in 20 m intervals. The dispersion transect data are identified by the codes GRID/200381/100M ....GRID/291281/700M, according to the sampling date and distance down the transect, in 100 m intervals. Each grid (0.5 m x 0.5 m) is an 8 x 8 set of contiguous cells, numbered across the rows, from top to bottom. Each cell is identified by its number.
