

INTERACTIONS BETWEEN

VEGETATION

AND

WATER YIELD

IN

TASMANIAN HIGHLAND CATCHMENTS

by I.J. Edwards

Submitted in fulfilment of the requirements  
for the degree of Doctor of Philosophy.

UNIVERSITY OF TASMANIA  
HOBART

Dec. 1973

Except as stated therein, this thesis contains  
no material which has been accepted for the award  
of any other degree or diploma in any University.  
To the best of my knowledge and belief, it contains  
no copy or paraphrase of material previously  
published or written by another person, except  
when due reference is made in the test  
thesis.

*J. J. Edwards*

## ACKNOWLEDGEMENTS

Prof. W.D. Jackson, as supervisor of this project, contributed valuable discussion and assistance in almost all aspects. Technical work constructing field apparatus was largely completed by Charles Pearson, John Harwood and Lee Johnson of the Botany Dept. workshop. Doug Madden's experience in electronics was invaluable in constructing and calibrating the tipping bucket run-off gauges. Bert Shepherd helped with much of the field work and shared the mapping of the fire boundary. Other members of the Botany Dept. gave help on numerous occasions, particularly Ray McVilley, Mick Brown, Mick MacPhail and Chris Harwood.

The Hydro Electric Commission provided most of the rainfall and streamflow data for the Central Plateau and the Bureau of Meteorology provided most of the associated climatic data. The assistance of personnel from both Departments is acknowledged.

The hospitality and assistance of Ross Smith, of Liawenee was most appreciated.

Assistance at all times was given by Hilary Edwards.

Fay Thwaites suffered my bad handwriting to type this thesis.

## CONTENTS

SUMMARY	1
CHAPTER 1. Introduction to the Central Plateau	3
Introduction	3
Glacial History	4
Geology	5
Soils	6
Vegetation	7
Water Catchments	10
Climate	15
Economic Importance	20
Management Policies	23
CHAPTER 2. The Effects of Vegetation on Water Reaching the Ground.	27
Summary	27
Introduction	28
Literature Review	28
Introduction	28
Historical Description	30
Gauge Efficiency	31
Magnitude of Deposits	33
Rime	35
Large Cloud Particles	36
Methodology	36
Experimental Procedure	39
Gauge Rationale	40
Sites of Gauge Installation	43
Measurement	43

## CHAPTER 2. (Contd.)

Run-off Plots	44
Results	50
Discussion	61
Mist Gauges	61
Run-off Plots	65
CHAPTER 3. Evapotranspiration.	71
Summary	71
Introduction	72
Effect of Altitude on Evapotranspiration	72
Measurement	73
Relationship between temperature and evapotranspiration.	73
Evaporation Pan Conversion Ratios.	76
Empirical Formulae based on the Physics of Evapotranspiration.	78
Water Budget.	97
Discussion	97
Conclusions	105
CHAPTER 4. The Effect of a Severe Fire on Streamflow.	108
Summary	108
Introduction	109
Assumptions inherent in Statistical Analysis Techniques	
Methods of Analysis	118
Multiple Regression Analysis	118
Multi-variate Analysis	121
Methodology Adopted	122
Results	126

CHAPTER 4. (Contd.)

Preliminary Analysis of Rainfall	126
Multiple Regression Analysis	128
Rainfall - Run-off Analysis	135
Discussion	138
Conclusions	142
 BIBLIOGRAPHY	 145

APPENDIX I      Note on Computing Facilities.

APPENDIX II     Paper entitled "Tipping Bucket Gauges for  
measuring run-off in experimental plots".

APPENDIX III    Paper entitled "Management of Water Yield".
